# Unisys

Modernize applications to rapidly deliver value at scale

Digital-first, securely built and user-friendly business apps

Highlights

Application Modernization: Unisys application modernization lets you retain all the functionality, features and performance of your legacy applications while gaining the power of cloud compatibility.

Migration and Transformation: Unisys migration and transformation handles everything involved in moving legacy applications, the app database and underlying infrastructure to the cloud, whether in a "lift and shift" approach or migration combined with modernization.

Cloud-Native Development: Unisys' cloud-native development means our applications are designed to deploy to the cloud and developed on cloud technology. Organizations can innovate with always-on, scalable applications.

Modern User Experiences: Unisys development teams follow a modern well-defined design process and leading UI/UX front-end development frameworks, resulting in intuitive and engaging applications.

DevSecOps: our comprehensive enterprise-scale DevSecOps approach to software development boosts business productivity, strengthens application security and increases compliance.

Even if your legacy applications are the heartbeat of your organization, each day you put off modernization is costly. You allocate substantial time and money for manual hardware and software upgrades. You spend hours on support and maintenance. And adding new features and functions takes months to implement, test and secure. Yet moving to the cloud raises valid questions: How much downtime and disruption will it cause? Can we modernize cost-effectively? Is the cloud secure?

Whether you opt to "lift and shift" your legacy applications to the cloud without modernization or rebuild them for the cloud, our expert guidance and solutions can keep your modernization efforts on budget, secure and with minimum downtime or disruption.

Retain value while meeting evolving needs.

With Unisys, you can modernize safely and securely to start reaping the cloud benefits of performance and cost savings. Invest in innovation and transform legacy applications to roll out new features and integration in just days.

How you benefit

Modernize legacy applications:

With Unisys, you get a dedicated team that ensures that your legacy applications retain all their functionality, features and performance while achieving the scalability and cost-effectiveness of the cloud. Speed your organization toward rapid innovation with modernized applications.

Migrate to the cloud with confidence:

With our accelerated application migration strategy, methods, frameworks and partnerships, we help you navigate migration complexities and ensure seamless migration of your mission-critical applications to your preferred public cloud or multi-cloud environment.

Enhance user experiences:

We prioritize the user experience and deliver apps with maximum user functionality. We can build independent and highly decoupled applications, including micro front ends, single-page applications, progressive web components and modern UI libraries.

Benefit from cloud-native applications:

Unisys' cloud-native development results in always-on, scalable applications engineered to harness the cloud's power. Our experts use proven microservices design frameworks and accelerators. As a result, you can build serverless applications with the same benefits as a static site but with unlimited scale and zero administration.

Automate app development and security:

Boost business productivity to continually deliver secure, compliant and high-quality applications with agility with Unisys DevSecOps. You can run app iterations in days rather than months and automate security and compliance operations to reduce risk, manual labor and potential threats. Ensure every operation, service or development application follows defined policies and procedures.

Get the expert guidance and execution you need to keep your modernization efforts on track, minimizing downtime and disruption and maximizing the potential of your people and services.

Why Unisys?

With cloud-certified staff in 110 countries, we have the global resources and talent to manage even the most complex on-premises and cloud environments. Each engagement is customized to our clients' needs and goals and is based on deep industry expertise in every sector we support.
